

1st Issue

1. **ID and area:** H1 HTML / content structure
 2. **Condition:** User action
 3. **Finding:** The table uses regular `<td>` cells instead of `<th>` elements for table headings.
 4. **Evidence:** Verified using Chrome DevTools.
 5. **Impact:** Screen reader users may not understand the relationship between table headers and table data.
 6. **Priority:** Medium
 7. **Next step:** Replace the relevant regular table cells with `<th>` elements.
-

2nd Issue

1. **ID and area:** H2 HTML / content structure
 2. **Condition:** Tool-based testing
 3. **Finding:** The page does not specify a document language.
 4. **Evidence:** Lighthouse reported that the `<html>` element does not include a `lang` attribute.
 5. **Impact:** Screen readers may mispronounce or misinterpret the page content because the language is not defined.
 6. **Priority:** High
 7. **Next step:** Add the language attribute to the opening HTML tag: `<html lang="en">`
-

3rd Issue

1. **ID and area:** R1 Responsive design
2. **Condition:** Zoom level / different screen sizes
3. **Finding:** The CSS media queries appear to conflict which may prevent responsive styles from applying correctly.
4. **Evidence:** Supported by browser observation, CSS validation, and MDN documentation on media queries.
5. **Impact:** Users on phones, tablets, or different screen sizes may experience layout issues or content that is difficult to view.
6. **Priority:** High

7. **Next step:** Review and adjust the CSS media queries so breakpoints are consistent and responsive styles apply correctly.
-

4th Issue

1. **ID and area:** A1 Accessibility
 2. **Condition:** User action
 3. **Finding:** Images do not include descriptive alt text.
 4. **Evidence:** MDN explains that alt text is important because screen readers read it aloud, and it is displayed if an image fails to load.
 5. **Impact:** Screen reader users may not understand the purpose of the images, and users with poor internet connections may lose important visual information.
 6. **Priority:** Medium
 7. **Next step:** Replace vague alt text such as the one used ("market") with meaningful descriptions that explain the image's content or purpose.
-

5th Issue

1. **ID and area:** D1 Discoverability and metadata
 2. **Condition:** Missing viewport meta tag
 3. **Finding:** The page does not include a viewport meta tag, so zooming or viewing the page on different screen sizes may not behave correctly.
 4. **Evidence:** MDN documentation for <meta name="viewport"> explains that this tag controls layout behavior on mobile browsers.
 5. **Impact:** Mobile users may see the page scaled incorrectly, making content harder to read or interact with.
 6. **Priority:** High
 7. **Next step:** Add the viewport meta tag inside the <head> section:
-

6th Issue

1. **ID and area:** A2 Accessibility
2. **Condition:** Page review
3. **Finding:** The text in the eyebrow element has low color contrast.
4. **Evidence:** Lighthouse extension identified this contrast issue.

5. **Impact:** Users with low vision, color blindness, or other visual impairments may have difficulty reading the text.
 6. **Priority:** Medium
 7. **Next step:** Change the text color to a darker or higher-contrast shade that meets accessibility contrast requirements.
-

7th Issue

1. **ID and area:** D2 Discoverability and metadata
 2. **Condition:** Code review
 3. **Finding:** The page is missing a meta description.
 4. **Evidence:** MDN documentation explains that meta description content provides page information used by browsers, search engines, and link previews.
 5. **Impact:** Search engines and link previews may not display a clear summary of the page, which can reduce discoverability and make the website seem less polished.
 6. **Priority:** Medium
 7. **Next step:** Add a clear meta description inside the head section of each HTML page.
-

8th Issue

1. **ID and area:** R1 Release quality
 2. **Condition:** Browser review
 3. **Finding:** The website does not include a favicon.
 4. **Evidence:** Verified through personal browser observation.
 5. **Impact:** The site may appear less polished or release-ready in browser tabs, bookmarks, and search results.
 6. **Priority:** Low
 7. **Next step:** Add a favicon so the website has a recognizable icon in browser tabs and bookmarks.
-

9th Issue

1. **ID and area:** R2 Release quality
2. **Condition:** Page review
3. **Finding:** The footer appears incomplete or poorly structured.

4. **Evidence:** Verified through personal observation of the page layout.
 5. **Impact:** Users may have difficulty finding important closing-page information such as contact details, copyright information, navigation links, or social links. This can make the website feel unfinished.
 6. **Priority:** Medium
 7. **Next step:** Redesign or complete the footer by adding useful information such as copyright text, contact details, navigation links, and consistent styling.
-

10th Issue

1. **ID and area:** R3 Responsiveness and release quality
 2. **Condition:** User action
 3. **Finding:** The sign-up form does not clearly mark required fields, and the form does not provide enough guidance or feedback to users.
 4. **Evidence:** Verified through browser observation while interacting with the form.
 5. **Impact:** Users may submit incomplete information or become confused about which fields are required, reducing the usability and reliability of the form.
 6. **Priority:** High
 7. **Next step:** Mark required fields clearly, add form validation, and provide helpful error messages or confirmation feedback when users submit the form.
-

High-Priority Findings — Remediation Tiers

First

ID	Finding	Priority
R1 (Responsive)	Conflicting/broken CSS media queries — responsive styles may not apply at all	High
D1	Missing viewport meta tag — mobile scaling/zoom broken	High
H2	Missing lang attribute on <html>	High
R3	Sign-up form has no required-field indication or validation feedback	High

Second

H1	<td> used instead of <th> or table headers	Medium
A1	Vague/non-descriptive alt text ("market")	Medium
A2	Eyebrow text fails contrast (Lighthouse-flagged)	Medium
D2	Missing meta description	Medium
R2	Footer incomplete/poorly structured	Medium

Last

R1 (Release quality) No favicon Low

Evidence. Lighthouse reports the html element is missing a lang attribute.

Impact. Screen readers may mispronounce the page's content without a declared language. Browsers and search engines also use lang for translation prompts and language-based indexing, so sighted users are affected too, just less directly.

Authority. Required by the WCAG Success Criterion for "Language of Page," at the baseline (Level A) conformance tier — this is a minimum accessibility requirement, not an enhancement.

Next step. Add the language attribute to the <html> tag on every page, then re-run Lighthouse to confirm the fix.
